**DETAILED ACTION**

1. A copy of a foreign document has been received.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kotani et al. (USPN 6101536) in view of Saxena et al. (USPN 6259449).

Regarding claim 1, Kotani teaches the image transmitting terminal used as image signal generating device which serves to receive a video camera control signal to control the camera and to execute the signal for transmission to a network through which transmission of an image to a remote monitoring takes place (col. 3, lines 9-18 and 63-66). Specifically, Kotani discloses the use of network (100) with respect to the monitoring terminal (60) transmitting control signals to the image-transmitting terminal (20). Kotani also teaches the monitoring terminal and transmitting terminal contain a software (410) and multiple softwares respectively (col. 4, lines 1-5, 32-36, Fig 1 & Fig 2). Kotani further discloses the image receiving software (412) for displaying the image data transmitted in a packet format from the image transmitting terminal, and a map management software (413) having graphic user interface (col. 4, lines 32-45 and Fig 2). Kotani teaches that the image transmission is made by a request from the image receiving software (412) to the image transmitting software (422), which in turn transmits the requested

data (col. 6, lines 7-14). In addition Kotani teaches the monitoring terminal (60) with respect to memory (124, 125 126) as well as various method of storing the data (col. 15, lines 9-19 & Fig 1). However, Kotani does not disclose the use of a function selection panel with multiple keypads and transmission interface through which image signals are received. Saxena on the other hand teaches user interface including keypads (420) displaying alphanumeric keys, and the use of a Universal Serial Bus (USB) both applicable to integrated communication center. See Fig 4 and col. 5, lines 32-45.

Therefore, it would have been obvious to one having skill in the art at the time the invention was made to modify Kotani's communication apparatus to include Saxena's keypad configuration along with the use of Universal Serial Bus (USB). One would have been motivated in view of the suggestion in Saxena that the use of keypads as used in the Saxena's user interface (Fig 4) along with USB are functionally equivalent to the desired function selection panel and transmission interface respectively. The use of keypads and USB helps function integrated communication system as taught by Saxena.

Regarding claim 2, see Saxena's Fig 4 (420).

Regarding claims 3, 6 and 8 Kotani teaches a network (100) along with image transmitting terminal (20). See Fig. 1.

Regarding claim 4, Saxena teaches the use of network (110) in terms if the Internet, LAN and WAN. See col. 3, lines 34-41.

Regarding claims 5 and 7, Saxena teaches the communication programs applicable for a speaker phone, video phone, and answering machine. See col. 1, lines 62-65.

Art Unit: 2674

Regarding claims 9 and 11, Saxena teaches the use of a Universal Serial Bus (USB). See col. 5, lines 32-45.

Regarding claim 10, Kotani teaches the use and method of storing in a memory medium including optical disk, and non-volatile memory card. See col. 15, lines 9-18.

Regarding claim 12, Kotani teaches the state of the display when grouping of icons are displayed as shown in Fig 13.

Regarding claims 13-14, Kotani teaches the camera control client (411) and camera control server (421). See Fig 2.
